Spindle Drive for Sunscreen

Summertime is barbecue time – and the bbq-donut® is here, with its colorful look and its offer of unlimited potential, an unusually round boat for unique barbecue and party moments on any lake or pool!

A large parasol, which provides protection against the harmful UV rays of the sun, can be minutely adjusted with a simple adjustment mechanism. This mechanism consists of a high-quality Ketterer spindle drive which runs on a high-grade screw-nut and can be operated simply with a handle. The easily-assembled spindle drive is very smooth-

running, and thanks to its self-locking will remain fixed in every position. The drive's long service life is guaranteed thanks to the exclusive use of corrosion-resistant materials.

This spindle drive guarantees simple maneuverability and a long service life even allowing for difficult conditions such as corrosion and wear. Give us a call and see for yourself!
