No electricity yet smooth: maximum lift with minimum effort

Ketterer has taken the well-being of its customers and the environment into account with its manual, gas spring supported fast crank lifting system for adjustable sit-to-stand workstations: the stepless, double-stroke telescoping height adjustment is extremely fast and convenient. Moreover, the “Green Solution” does not require any electricity which not only saves on energy costs but also on complicated wiring. The double-telescoping spindle system allows for a wide range of working positions – from a child’s table up to an ergonomically designed standing desk for grown-ups.

The fast crank lifting system is suitable for double-stroke telescoping table frames that have either one or two legs. The table can easily be cranked up and down, even with a weight load of up to 40 kg.

While other systems work with spring packs or counterbalances, the Ketterer system is self-locking, i.e., it stays put regardless of the respective weight load. A special bonus: The system is available separately without a frame and is custom-made to meet the customer’s needs and specifications.
